Environment Policy

Purpose

Banqsoft strives to be a credible and environmentally responsible partner to our customers. As a company Banqsoft will be responsible with regards to our impact on the climate and environment.

Policy Statement

We think globally and act locally aiming to provide the most environment friendly products and services possible.

- We will comply with environmental laws and regulations associated with our business activities, honor agreements with stakeholders, and other commitments such as the UN Global Compact principles.

- We will strive to conserve energy, save resources, differentiate collection of waste and prevent environmental pollution and waste along the entire supply chain.

- We will assess the environmental impact throughout the entire life cycle of ICT solutions and service development with considerations for reducing environmental burden.

- We will prioritize the procurement of environmentally friendly hardware, software, and services.

- We will raise the environmental awareness of each and every one of our employee and contribute to the conservation of the global environment through the promotion of climate change action, resource circulation, and biodiversity.

- Although IT through the use of energy, minerals, and metals impact the planet significantly, IT can also help reduce the global impact on the climate and the environment. Banqsoft's products can reduce traffic, use of paper and help optimize our clients' business. Thus, we also see our products and services as one of our greatest assets in the quest to help our customers to a more sustainable footprint.

- We will strive to improve an environmental management system with environmental targets and conduct periodic reviews to realize continual improvement. (Credit Management only)

- We strive to travel only when necessary
